DISTRIBUTION BOARDS

SIEMENS

Minigard Distribution Board

Aesthetically designed Distribution Boards that blend with all interiors

Siemens Distribution Boards provides total circuit protection and control for both domestic commercial and industrial applications. The most compact DB range is designed for housings, shops, offices and many other commercial applications. The range offers a choice of incoming devices via Isolators, MCBs or RCCBs and a choice of enclosures from four way to twelve way, in single and double door designs. [For detailed information on available configuration & dimensions please refer from page no 4 to 11]

Design:

Siemens Distribution Boards in sheet steel have been specifically designed, keeping in view the interiors of modern day houses and commercial establishments.

The minimum depth of Siemens MCB, is only 55mm. As a result the Distribution Boards are of the most shallow depth 62 and 90 mm in single door and double door design respectively.

This enables the Distribution Boards to be installed even in single brick walls!

Installation:

Adequate numbers of knock-out detachable plates of various sizes are provided both at the top and at the bottom. This enables easy installation and connection of conduits of all sizes.

In case of double door design, a specially designed hinge enables the door to be opened up to 120° for total ease of operation. During wiring/ installation, the door along with the intermediate plate can be completely removed if required.

For total ease of operation, the door is secured to the housing by means of a magnetic latch. Only a slight pull opens the door.

Construction:

The Distribution Boards are manufactured, with precision, out of extra thick, high quality CRCA steel sheets for lasting strength and fine finish. IP 20/IP 42 protection shall be offered for single door and double door execution respectively. All DBs are manufactured with 16/18SWG. The Distribution Boards are supplied duly fitted with DIN-channel, neutral links, busbars and connecting wires.

Finish:

The Distribution Boards have been treated with premier quality powder coating using latest techniques. The enclosures are subjected to the seven tank process to ensure smooth finish and protection against corrosive atmosphere.

Double Door Concept for Aesthetic and Safety

To ensure total safety, an intermediate plate has been introduced so that even when the door is opened, no live parts are exposed. The door is earthed through a copper braid, for total safety.

Slim, Sleek and Stylish

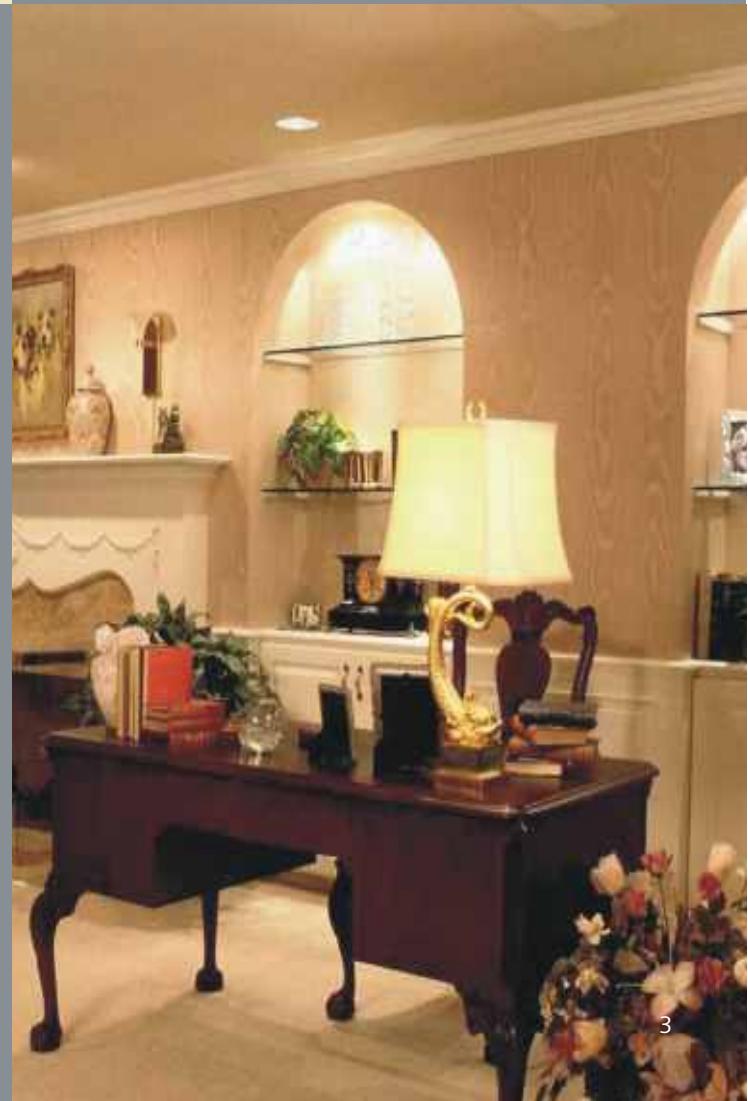

Slim: Lowest depth which fits into single brick wall.

Sleek: Vertical design distribution board which can be fitted in just 250mm width area.

Stylish: Aesthetically designed distribution boards that blends with all interiors.

Features at a glance :

- Compact design, lowest depths of 62mm and 76mm which fits into single brick wall for flush mounting.
- Removable knockout plate at the top and bottom side with sufficient knockout holes.
- Attractive styling and finish matches any decor in houses, flats or offices.
- Fully removable assembly enables quick installation and improves access for ease of cabling.
- Latest powder coated techniques prevent corrosion and is scratch resistant.
- Shorting Links/Busbar made up of Tinned Electrolytic Copper to accept Minigard MCBs, RCCBs and Isolators.
- Brass neutral links accepts cable termination up to 16 sq.mm.
- Effective earthing of DB body with two earthing terminals. Earthing of the door with the help of Copper Braid.
- Can accommodate 5SQ, 5SX, 5SJ, 5SP MCBs & 5SM, 5SU RCDs and complete range of modular devices.
