HOUSEGARD – Flame Retardant PVC Insulated Cables

HOUSEGARD – 180 / 270 M SPECIAL PROJECT PACKAGING

Each Housegard wire is manufactured using 99.97% pure, electrolytic grade, bright annealed bare copper with more than 100% conductivity, supplied by the Group Company - Finolex Wire Products Ltd., Verna, Goa. The wire is insulated with a Flame Retardant (FR) PVC compound with a high oxygen and temperature index, specially formulated and manufactured in-house. A special grade PVC Resin manufactured by Finolex Industries Ltd. is used in formulating this compound. These ISI marked wires meet the requirements of IS 694 : 1990 and are approved by FIA /TAC.

ADDITIONAL FR PROPERTIES		
Test	Specification	Specified Values
Critical Oxygen Index	ASTM-D 2863	Oxygen Index Minimum 29%
Temperature Index	ASTM-D 2863 & BICC Hand Book Chapter No. 6	Minimum Temperature Index 250°C
Also meets requirements of Flammability Test as per IEC 60332-1		

The need of the day is new circuitry and additional points to accommodate modern gadgets. Add to this, large scale projects undertaken nowadays. Since the size of constructions is not only larger but also more widespread, there is a surge in the need for electrical wires of longer lengths. Finolex is a major supplier of electrical wires to such big construction projects. Finolex electrical wires enjoy approvals from architects, electrical contractors, consultants and builders, for whom the quality of electrical wires is of utmost importance.

Finolex now introduces two new lengths - 270 metre coils (triple coils for sizes 1.0 , 1.5 and 2.5 sq.mm) and 180 metre coils (double coils for sizes 4.0 and 6.0 sq.mm) to suit the requirement of big housing projects.

Housegard with longer lengths has many advantages.

ECONOMICAL

This longer length is more economical as less leftover pieces are generated from each coil after wiring thereby reducing scrap. The inventory of leftover coil length is also reduced to a great extent.

SAFE

In case of bigger construction projects, longer connections are required. With Housegard, due to the longer length, the number of joints in electrical conduits are reduced, ensuring safe and jointless wiring in electrical installations.

Hence additional safety in wiring is ensured.

STORAGE SPACE SAVING

Since each coil is of longer length and more compact, more wires can be accommodated in the same storage area, thus making optimum use of available storage space.

These longer length coils are manufactured on high precision computerised coiling machine which ensures exact length and compactness. They are further poly-wrapped and packed in specially designed sturdy master cartons.
